Terri,

Keep me informed and enlightened concerning your progress and learning.

By the way, if you don't know it yet, I tested the LSI LEDs, specifically those with the 3000K, CRI 95+ in my accelerated aging booths and there is no evidence that the LSI white LEDs pose any risks larger than FILTERED halogen lighting and safer than unfiltered halogens. So rest assured your strategy of using the same lighting recommendations that you used for halogens is a proper and reasonable decision. This is a point I did make in my Guidelines.

Warmest regards,

Jim
